321 7590 03/07/2008 SENNIGER POWERS LLP ONE METROPOLITAN SQUARE 16TH FLOOR ST LOUIS, MO 63102			EXAMINER CHANDRAKUMAR, NIZAL S	
			ART UNIT 1625	PAPER NUMBER
			NOTIFICATION DATE 03/07/2008	DELIVERY MODE ELECTRONIC

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

uspatents@senniger.com

#### **DETAILED ACTION**

Applicants response filed 02/21/2008 is acknowledged.

Claims 1-17 and 19-23 are pending.

Response to Applicants Remarks:

#### **Claim Rejections - 35 USC § 112**

Applicants amendments overcome the previously presented rejections under (35 USC § 112 first and second paragraph). However, Examiner notes that there could be no usage of the hydrogen in the hydrolysis reaction as noted on page 9, line 3 and 4.

#### **Claim Rejections - 35 USC § 102**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Applicants arguments are not persuasive to overcome the previously presented rejections under (35 USC § 102 as being anticipated by Sutton et al. US 6936727. Accordingly the rejection of 1-17 and 19-23 is maintained.

Applicants argue that the heat of (hydrogenation) reaction in the pre-reactor zone may be used to evaporate a portion of the liquid feed. Further because the organic feed material is vaporized prior to reaction, the prior art process can not attain the advantages of the instant processes.

The cited reference teaches two stages of hydrogenations, step (c) and step (e) of claim 1 of US 6936727. Further, in claim 1, step (d), the terms 'such that the additional feed material is vaporized **by**'

Art Unit: 1625

clearly shows that the teaching of Sutton et al. '727 in the use of heat generated in the first reaction for the vaporization of additional feed.

Thus the terminology used in the instant claims 'pre-reactor' zone and 'reaction zone' relate to the same two hydrogenation zones of the prior art. What happens in the two zones of hydrogenations in the instant process and the prior art process is inherently, functionally equivalent.

### Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-17 and 19-23 rejected on the ground of nonstatutory double patenting over claims of U. S. Patent No. 6936727 since the claims, if allowed, would improperly extend the "right to exclude" already granted in the patent.

The previously presented rejection is maintained because applicant's arguments are not persuasive.

Applicants argue that the office did not articulate how the skilled artisan would arrive at the claimed process based on the teachings of the claims of '727.

The skilled person would know, that the heat of reaction of saturation of double bonds is retained in the vapors that is coming out of the 'pre-reactor zone' (the first reaction zone of '727 in step ) unless there is a intervening cooling process is present before the vapors enter another zone (second reaction

zone of '727) for subsequent reactions (hydrogenation or dehydration). Such an intervention of the product and process of the first hydrogenation is not present in '727 process as well as in the instant case.

Also see rejections under 35 U.S.C. 102.

Furthermore, there is no apparent reason why applicant was prevented from presenting claims corresponding to those of the instant application during prosecution of the application which matured into a patent. See *In re Schneller*, 397 F.2d 350, 158 USPQ 210 (CCPA 1968). See also MPEP § 804.

No claim is allowed.

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to NIZAL S. CHANDRAKUMAR whose telephone number is (571)272-6202. The examiner can normally be reached on 8.30 AM - 4.30 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Janet Andres can be reached on 571 0272-0867. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
